

A. Objective histories: non-stellarator-symmetric LASYM policies

B. Final-state atlas: CPU LASYM continuation policy

C. Final-state atlas: CPU LASYM direct start policy

D. Final-state atlas: GPU LASYM continuation policy

E. Final-state atlas: GPU LASYM direct start policy

F. Sweep summary tables

Figure 1 displays the sweep summary statistics for the four datasets (A, B, C, D) across four different sweep methods (A, B, C, D). The figure is organized into a 4x4 grid of heatmaps, where each row corresponds to a dataset and each column to a sweep method. The diagonal elements represent the sweep statistics for the same method as the dataset, while the off-diagonal elements represent the sweep statistics for different methods. The color scale ranges from 0.0 (blue) to 1.0 (red), indicating the magnitude of the sweep statistics.
